

Reveal Sheet - Session 10 Profile A

P_θ is stable at .91; no all-pass proper subsystem exists; B^+ is resolved. $V = .80[.74, .86]$, $N_1 = .72[.66, .78]$, $N_2 = .70[.64, .76]$, and $N_3 = .58[.52, .64]$. Validation anchors were constructed independently.
