

Reveal Sheet - Session 12 Dossier B / Six-Month Infant

PRI is .69 [.66, .72]. Homologous signal genealogy and artifact controls pass. Conserved thalamocortical causal role and matched perturbation response pass. Preregistered developmental calibration gives sensitivity .87, specificity .84, and threshold .64. Boundary and sleep-wake regime are stable. The theory's other required gates are stipulated to pass for this specified trial.
