

Reveal Sheet - Session 13 Profile E / Full-Bundle Challenge

S is a stable P_θ referent and V, N_1, N_2, N_3 pass; no all-pass proper subsystem exists, the positive-bearer relation is resolved, and $S \in \hat{B}_{min, \theta}^+(c)$. A separately validated anchor vector falls in a strong rule-out region; every source, independence, boundary, and validity license passes.
