

Reveal Sheet - Session 6 Complete Synthesis

Release only after all teams record their partial-evidence limits.

Synthetic condition	Interval	Fidelity	V	N ₁	N ₂	N ₃	Report accuracy
Early interruption	55-85 ms	.40[.34,.46]	.79[.73,.85]	.51[.45,.57]	.48[.42,.54]	.31[.25,.37]	.33[.27,.39]
Target return-path cut	145-180 ms	.82[.77,.87]	.79[.73,.85]	.71[.65,.77]	.68[.62,.74]	.39[.33,.45]	.58[.51,.65]
Late report-path cut	360-390 ms	.83[.78,.88]	.80[.74,.86]	.72[.66,.78]	.69[.63,.75]	.66[.60,.72]	.29[.23,.35]
Sham	145-180 ms	.83[.78,.88]	.80[.74,.86]	.72[.66,.78]	.69[.63,.75]	.67[.61,.73]	.84[.78,.90]
Pathway rescue after target cut	145-180 ms	.82[.77,.87]	.79[.73,.85]	.71[.65,.77]	.68[.62,.74]	.65[.59,.71]	.82[.76,.88]

Paired-change intervals for the retained components are:

Synthetic condition	ΔV	ΔN_1	ΔN_2	ΔN_3	R_C / mapping status
Early interruption	[-.04,.02]	[-.29,-.15]	[-.28,-.16]	[-.43,-.31]	.88 / pass
Target return-path cut	[-.04,.02]	[-.06,.02]	[-.06,.02]	[-.35,-.23]	.90 / pass
Late report-path cut	[-.03,.03]	[-.05,.03]	[-.05,.03]	[-.06,.02]	.91 / pass
Sham	[-.03,.03]	[-.05,.03]	[-.05,.03]	[-.05,.03]	.91 / pass
Pathway rescue after target cut	[-.04,.02]	[-.06,.02]	[-.06,.02]	[-.07,.01]	.90 / pass

For the late report-path cut, the paired change in report accuracy is $[-.65, -.49]$; this is a stipulated synthetic teaching interval, not an empirical estimate.
