

Reveal Sheet - Session 12 Dossier A / Octopus

PRI is $.72[.67, .77]$. Perturbational differentiation appears similar although sensor layout differs. Distributed arm-brain effects are demonstrated under route interruption. No target-domain rule-in/rule-out study exists and the source threshold was copied. The mapped organism P_{θ} referent is stable for the trial. The theory's other required gates are stipulated to pass for this specified trial.
